## COMPANY DESCRIPTION

### **About Coventor**

Coventor, Inc. is a market leader in automated design solutions for micro-electromechanical systems (MEMS). Its software tool suite and expertise in MEMS design address the challenges of integrating these devices into the growing number of products -- from smart phones to video games to home entertainment systems -- that are adopting MEMS-enabled capabilities. Coventor's solutions specifically offer designers of traditional digital and mixed-signal ICs, ASICs and SOCs a way to efficiently integrate MEMS into their design methodology without having to be experts in mechanical design. Its MEMS+™ design platform works seamlessly with popular electronic design automation (EDA) flows and tools, reducing the complexity and risk of adopting MEMS. The company is headquartered in Cary, North Carolina and has offices in San Mateo, Calif., Cambridge, Mass., and Paris.
